

Reading a weekly bond report

西部固收 · 债市扰动增加，但无需过度担忧

Western Securities · 6 September 2026

The report's structure

一、 复盘综述与债市展望	4
二、 债市行情复盘	7
2.1 央行净回笼，跨月后资金面转松	7
2.2 二级走势：震荡下行	8
2.3 债市情绪：30Y 国债换手率下降，债基久期中位数回升	10
2.4 债券供给：本周利率债净融资额环比下降	12
三、 经济数据：电影消费、港口吞吐量走弱	14
四、 海外债市：美国 8 月非农就业数据强劲	16
五、 大类资产：原油上涨，黄金下跌	18
六、 债市日历	19
七、 风险提示	19

I Outlook & strategy

The author's forecast and allocation advice

II Market review

Funding, yield changes, sentiment and issuance

III–V Economic context

Domestic data, overseas bonds and other assets

VI–VII Calendar & risks

Upcoming events and threats to the forecast

What a weekly bond report covers

Market review

Yield levels and changes, the curve, trading sentiment, issuance and funding.

This issue: bond gains, cheaper repo and net withdrawal.

Economic and policy context

Growth, inflation, monetary and fiscal policy, overseas rates and other assets.

This issue: a better PMI reading, with recovery still incomplete.

Outlook, strategy and risks

A forecast horizon, a portfolio implication, and events that could change the view.

This issue: range-bound long yields and selective 3–5Y opportunities.

The week in four signals

10Y / 30Y yields

1.68% / 2.13%

Both -1 bp → modest price gains

Weekly net OMO

-RMB 1.4115tn

Net withdrawal, despite cheaper repo

DR007

1.37%

-1 bp → cheaper bank repo

Manufacturing PMI

49.2 → 49.8

Improved; still below 50

The central puzzle: cash became cheaper while the PBOC withdrew funds

A rally can leave some maturities behind

表 3: 本周国债和国开债收益率走势

		利率水平 (%)							
		3m	1y	3y	5y	7y	10y	20y	30y
国债	中位数	1.40	1.41	1.50	1.62	1.75	1.84	2.24	2.26
	最新水平	1.21	1.23	1.25	1.40	1.53	1.68	2.12	2.13
	变动情况 (bp)	1	2	-1	-1	-1	-1	-2	-1
	本周走势								
	最新分位数	18	18	3	3	2	13	24	25
	经调整后分位数	31	31	8	8	9	16	51	42

3M / 1Y

Yield ↑ → Price ↓

Most longer maturities

Yield ↓ → Price ↑

The author's positions and our assessment

Author's position	Our assessment
Range-bound long yields	Plausible with stable funding
Keep current duration	Investor's risk budget matters
Consider 3–5Y policy-bank bonds	Yield pickup vs funding and liquidity
30Y previous-issue / 10Y compression	Requires exact-bond evidence

We lean towards 3–5Y; compression remains conditional

Fundamentals, policy and funding

Fundamentals

Growth, inflation and private credit demand

Is demand weak enough to support further easing?

Policy

Policy rates, reserve requirements and fiscal issuance

Will policy add support or increase the supply banks must absorb?

Funding

Repo rates, NCD costs and funding maturities

Can investors finance and retain their bond positions?

The three perspectives explain different parts of the same market

PMI improved; recovery remains incomplete

August manufacturing PMI

49.2

July

→ 49.8

August

< 50

Expansion threshold

Broad, repeated
improvement

→ Fewer expected cuts

→ Yields may rise

One stronger release gives no precise yield target

Growth news reaches bonds through expectations

GDP beats expectations

→ Fewer expected cuts

→ **1–3Y yields ↑**
Bond prices ↓

Spending and investment ↑

→ Loan demand ↑
Bank bond demand ↓

→ **Persistent recovery:
long yields may rise**

One month of better orders

→ Near-term policy revision only

→ **Short yields may move more**

Housing demand weakens

→ More easing expected

→ **Govt yields ↓**
Property spreads may ↑

Financing growth needs a composition check

Signal	Mechanism	Bond implication
Persistent CPI / core CPI ↑	Expected rates ↑	Nominal yields may rise
PPI ↑	Demand recovery or cost shock	Credit effect depends on margins

Headline financing rises

**Private borrowing
drives it**

→ Spending demand ↑ → **Less case for easing**

**Government
issuance drives it**

→ Private demand may stay weak → **Easing case + supply pressure**

R007 and DR007 cover different funding samples

DR007	R007
Deposit-taking institutions	Banks and non-banks
Rate-bond collateral	Broader collateral set
1.37%	1.40%

3 bp

Closing gap on 4 Sep
Sample and collateral also matter

Both measure seven-day repo; neither is the policy rate

Deposits and NCDs fund the same bank differently

	Deposits	NCDs
Funds from	Households / firms	Interbank investors
Form	Bank accounts	Tradable bank debt
Tenor	Demand or term	Commonly up to 1Y
Key exposure	Withdrawals / repricing	Maturities / new-issue yield

Bank issues NCD → Investor buys NCD → **Cash goes to bank**

Higher funding yields affect issuers and holders

A repo-funded position must refinance

Bond yield		Repo cost		Yield–cost gap
2.0%	–	1.4% → 2.2%	=	+0.6 → –0.2 pp

NCD market yield rises

Three policy transmission routes

September 2024 easing: forecast and outcome

27 Sep 2024

→ Conditional forecast

→ Year-end outcome

RRR -0.5 pp
Policy rate
1.70% → 1.50%

Lower refinancing cost
→ Lower short yields

Repo
1.83% → 1.65%
1Y govt
1.37% → 1.08%

The direction matched; the cut does not explain the entire move

Debt issuance met an identifiable liquidity offset

RMB 2tn
swap issuance

→ PBOC offset
arrived

→ **No sustained rise
in average funding
cost**

2024 allocation
Settlement can absorb
cash

Net bond purchases
Nov: RMB 200bn
Dec: RMB 300bn

December repo: 1.65%
September: 1.83%

Support for a funding-price forecast, not a reserve-quantity claim

Short operations reflect substitution and timing

图 1: 央行主要工具投放情况

资料来源：iFinD，西部证券研发中心

Jan–Mar

Longer tools + cash return
→ less short-repo reliance

Apr–Jun

Quarter-end cash needs
→ temporary short support

Jul–Sep

Maturities + tool substitution
→ short support unwinds

CMB H1: deposits +3.32% > loans +2.69%

Less need for NCDs is plausible for this bank; 56% is quota usage.

September–December funding outlook

Our forecast: funding pressure may recur at quarter-ends

Both September and December may see temporary repo-rate spikes.

Pressure points	Government bond issuance, tax payments and banks' quarter-end cash buffers can increase demand for funding.
Expected relief	We expect temporary needs to fade and PBOC support to limit each episode. December can bring a fresh spike.
Effect on bonds	If refinancing costs stay manageable, investors face less pressure to sell bonds for cash. Bond prices can still fall.

Reassess if repo and NCD costs remain high after the pressure dates

ICBC: the 3–12 month funding gap widened

Gap = assets – liabilities in each remaining-maturity bucket

RMB trillion. Negative: more liabilities. Positive: more assets.

Remaining maturity	Dec 2025	Jun 2026
Within 1 month	–1.887	–1.611
1–3 months	–2.525	–1.134
3–12 months	–1.205	–4.034
Over 1 year*	+22.355	+23.994

–4.034: 3–12M liabilities exceed assets by RMB 4.034tn.

The gap widened by RMB 2.829tn. Deposit renewal or other funding matters.

Costly refinancing could reduce new long-bond purchases.

Net withdrawal coexisted with cheaper cash

表 2：央行公开市场操作情况（亿元）

本周投放回笼	8.31	9.1	9.2	9.3	9.4	合计
投放量	4520	3640	0	0	0	8160
回笼量	6730	8330	5985	1030	200	22275
净投放量	-2210	-4690	-5985	-1030	-200	-14115
下周投放回笼	9.7	9.8	9.9	9.10	9.11	合计
回笼量	5050	50	0	0	0	5100

资料来源：iFinD，西部证券研发中心

-RMB 1.4115tn

Weekly net withdrawal

DR007 1.37%

Down 1 bp over the week

Month-end passed

→ Temporary cash
demand eased

→ **Repo rates fell
despite withdrawal**

The hypotheses have different evidence strength

Evidence strength	Hypothesis	What supports it
Strongest timing match	Month-end buffers fall	31 Aug tight → 1 Sep easier
Background support	Weaker credit demand	Jan–Jul credit increase: RMB 2.14tn less than 2025
Same-week flow unverified	Other reserve inflows	August purchases ≠ this week's inflow

Month-end timing leads; a fiscal offset remains a hypothesis

A swap exchanges fixed and floating interest

FR007 = current 7-day fixing

1Y IRS = fixed quote for a 1-year swap

Pink subtracts FR007, not the grey policy rate

图 9: 从 IRS 指标看当前降息预期不高

资料来源: WIND, 西部证券研发中心

Yellow: 1Y IRS

Grey: policy rate

Pink = IRS - FR007

FR007 is not drawn separately

Example

$1.40\% - 1.50\% = -10 \text{ bp}$

A bond rally need not compress the 30Y–10Y spread

This week: $2.13\% - 1.68\% = 45$ bp; little change

Hypothetical 10Y move

Yield -5 bp
Price rises

Hypothetical 30Y move

Yield -1 bp
Price rises

Spread change = $-1 - (-5) = +4$ bp

Exact previous-issue demand and long-end supply can prevent compression

The outlook has three conditional branches

Our call: mildly bullish within a range

Support for a modest rally

DR007 1.37% < policy 1.40%

Credit increase below last year
PMI 49.8

Next 1–4 weeks

Limits to the rally

NCD issue yield 1.48%

Government issuance ahead
Stable liabilities still needed

Prefer 3–5Y exposure; no automatic 30Y–10Y compression

A concise independent conclusion

Mildly bullish within a range

Because

Stable repo + incomplete credit recovery

But

NCD costs + government supply limit upside

Reassess when

Persistent funding stress or stronger credit demand
